

Custom Engineered Systems

CUSTOM SYSTEMS

- Robotics
- Scientific Instruments
- Product Development
- Manufacturing Automation
- Motion Control Systems
- Functional Test Systems

FEDERAL WORK

- Registered on CCR
- Accept government credit cards
- DOJ project experience
- Sub-contractor on two DOE contracts
- Very small business size classification
- Proven track record

Electromechanica, Inc.

Electromechanica, Inc. is an engineering service consultancy specializing in electrical, mechanical, manufacturing, RF and software engineering. Clients utilize our expertise in the design and fabrication of prototype electromechanical systems. Electromechanica designs systems that include consumer products, robotics, automated manufacturing lines, custom test equipment and scientific instrumentation. Markets served include industrial, commercial, government, research and educational institutions. Our engineers provide cost effective, innovative solutions to complex technical challenges that are not easily solved with off-the-shelf technology.

Engineering Staff:

- **Mechanical**
- **Electrical**
- **Software**
- **Manufacturing**
- **RF**

Scientific instrument for thin film analysis (top), multi-bay functional PCB test system (below), and velocity of detonation measurement system (far left)
